

35th INTERNATIONAL COTTON CONFERENCE BREMEN 2021

Presentation

Session: **Cotton Quality & Testing 2 (T5)**

Title: **Stickiness measurement in the cotton quality testing**

Speaker: **Gabriele Salvinelli**, MESDAN S.p.A., Puegnago del Garda, Italy

Presentations are available on the conference archive: <https://baumwollboerse.de/en/cotton-conference/lectures/>

PASSION FOR COTTON!
INTERNATIONAL *Cotton* CONFERENCE
THE HYBRID EDITION | BREMEN 2021 | MARCH 17 - 18

- INSTRUMENT DESCRIPTION & FUNCTION PRINCIPLE
- TEST VOLUME IN FIELD TESTING
- ITMF-ICCTM RECOGNITION
- REPEATABILITY & REPRODUCIBILITY
- CORRELATION WITH REFERENCE METHODS
- INTER-LABORATORY VARIABILITY
- FINAL SUMMARY

STICKINESS TESTING METHOD

UNI EN 14278-3

ITMF - ICCTM
recognized

see: www.itmf.org

USEFULNESS / BENEFITS

- Measure and classify sticky points in cotton fiber
- Fully automatic high-speed tester;
- Spinning-like preparation of samples (cotton web);
- Thermodetector at typical T(°C) of spinning mill machines;
- Large mass testing for bale characterization before spinning;
- Reduction of the risk of issues during spinning due to stickiness;
- Almost operator-independent.

RANGE OF APPLICATION:

- 100% raw cotton fibers (also sliver can be processed);
- From short to extra-long staple fibers (20 mm < UHML < 40 mm).

RECOGNITED PARAMETER:

- Stickiness Grade

NECESSARY SURROUNDING:

- Standard atmosphere, ASTM D1776 (21 ± 1°C, 65% ± 2% RH);
- Pre-conditioning for at least 24 hours.

SAMPLE PREPARATION

- Remove large foreign particles (barks / entire seeds);
- Fluff the fibers to eliminate dense clumps or knotty balls;
- Weight a portion of **3.5 ± 0.2 g**;
- Stretch the fibers, as to reach the proper length of **30 ± 3 cm**;
- Roll the material to obtain a cylindrical shape;
- Insert the sample onto the conveyor belt.

CONTEST-S MEASURES ONLY STICKINESS

- Sample preparation: 30 sec
- Sample transfer: 20 sec
- **Testing time: 30 sec**

CONTEST-F IS A HIGH VOLUME COTTON TESTING EQUIPMENT, WHICH INTEGRATES THE STICKINESS TESTER

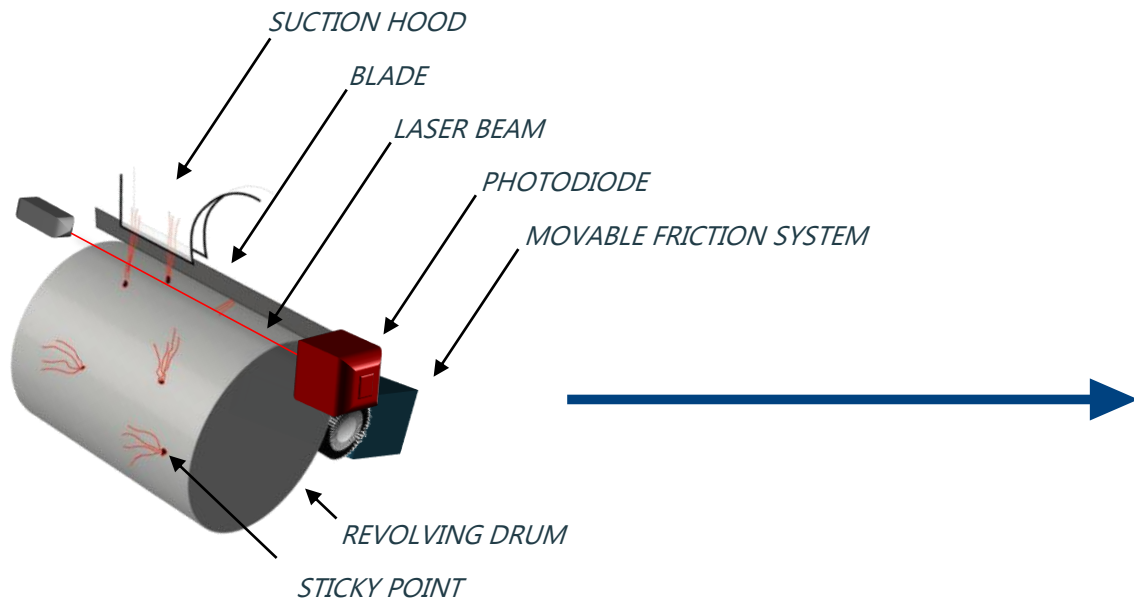

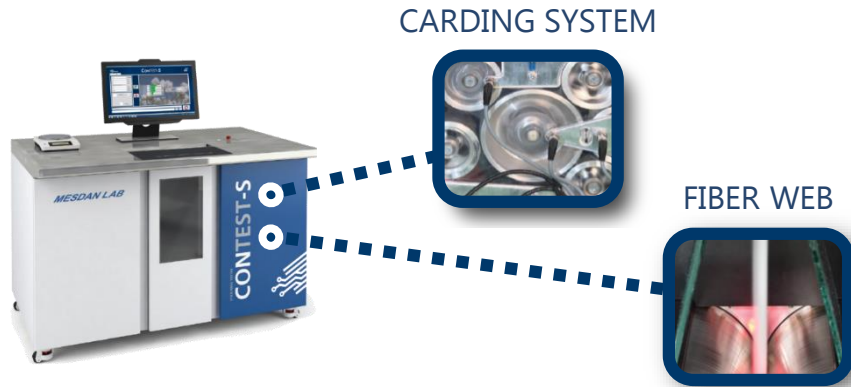

Additional parameters :

- UHML, UI, Strength, Elongation, SFI, Moisture
- Rd, +b, Color Grade
- Trash Count, Trash Area, Leaf Grade
- Micronaire, Maturity, Fineness

Stickiness measurement

- Sample preparation: 30 sec
- Sample transfer: 30 sec
- **Testing time: 60 sec**

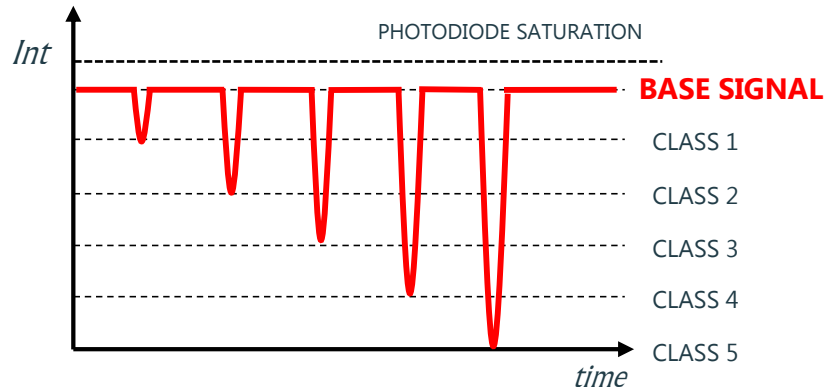

PARAMETERS AND DEFINITIONS

- Stickiness Count (St Cnt) [1/g]** : tot num. of sticky points
- St Count 1 [1/g] : num. of sticky points of CLASS 1
- St Count 2 [1/g] : num. of sticky points of CLASS 2
- St Count 3 [1/g] : num. of sticky points of CLASS 3
- St Count 4 [1/g] : num. of sticky points of CLASS 4
- St Count 5 [1/g] : num. of sticky points of CLASS 5
- St Avg Size (St Size) [a.u.]** : the mean class of St Cnt

STICKINESS GRADE (St Grade) = $\sum_{i=1}^5 (i \cdot S_i)$

S_i = num. of sticky points of class i

INTERNATIONAL TEXTILE MANUFACTURERS FEDERATION
 FEDERATION INTERNATIONALE DES INDUSTRIES TEXTILES
 INTERNATIONALE VEREINIGUNG DER TEXTILINDUSTRIE

The ITMF International Committee on Cotton Testing Methods (ICCTM) recognizes for spinning mill / research purposes the following method / instrument:

Stickiness Testing Method for Contest Instruments

manufactured by:
 Mesdan Spa.
 Via Masserino 6
 IT-25080 Puegnago del Garda (BS) / Italy
 Tel.: +39(0)365/653142
 Fax: +39(0)365/651011
 Email: sales@mesdan.it
 Website: www.mesdan.it

The Stickiness Testing Method for Contest Instruments is a method for the determination of the stickiness of cotton, based on the thermo-mechanical principle on an automatically prepared thin fibre web.

Recognition of a testing method or instrument means that according to the Committee the instrument manufacturer has provided sufficient information and results from instrument comparison of multiple testing units in order to assess whether the instrument can be usefully applied in textile mills or for research purposes.

 Axel Drieling
 Committee Chairman

 Mona Qaud
 Committee Vice Chairwoman

 Christian Schindler
 ITMF Director General

Mesdan may use this logo for Contest instruments including this recognized method.

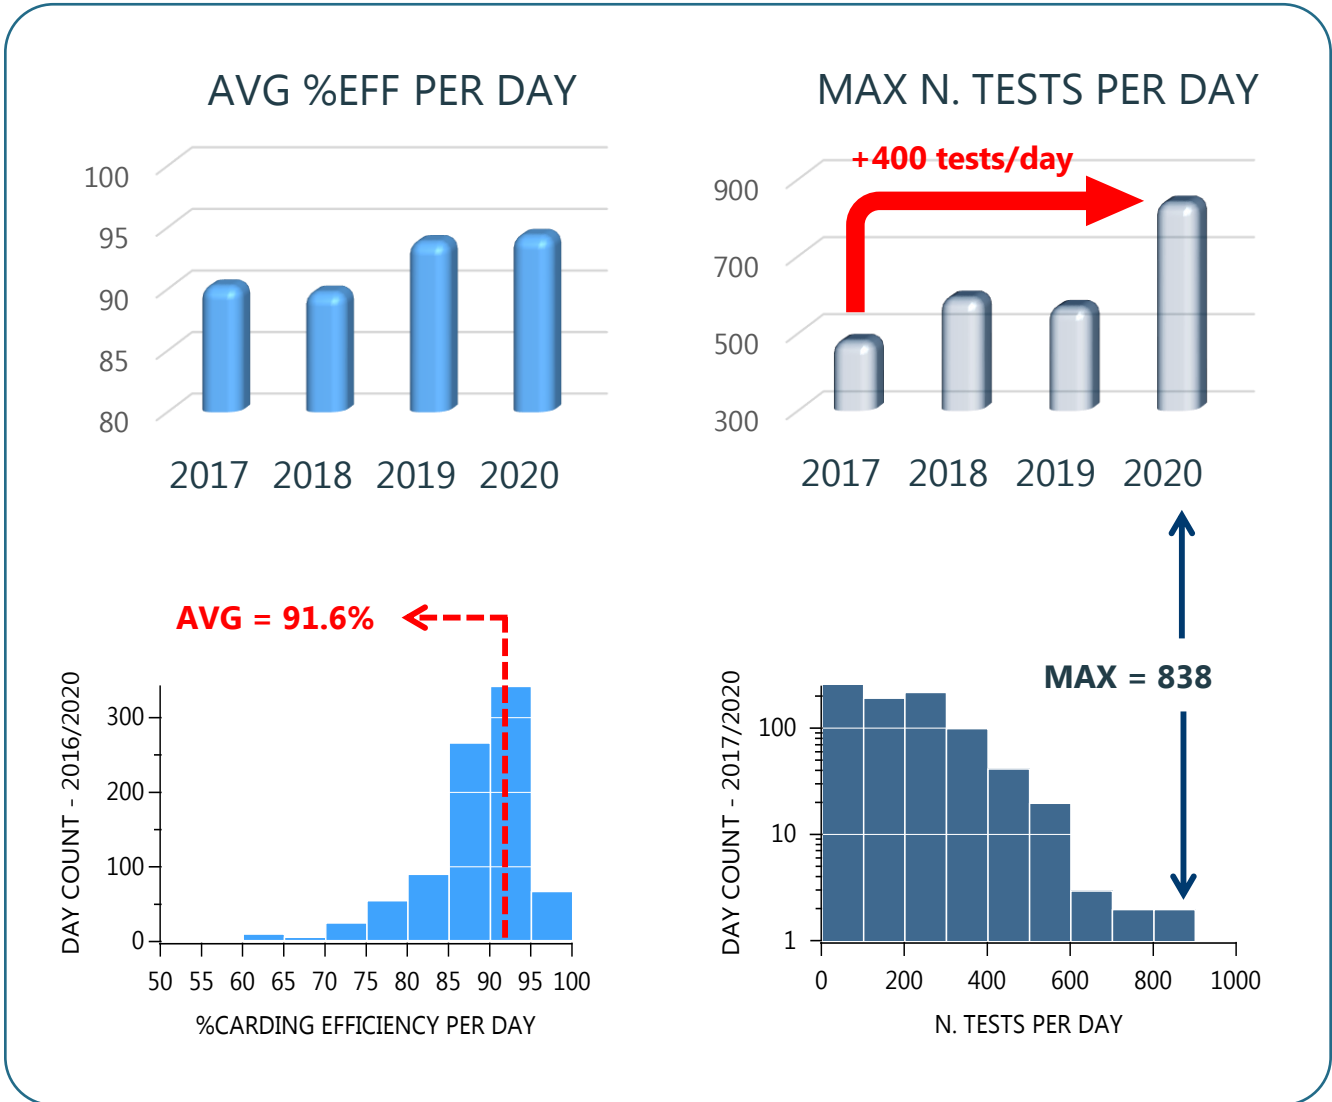

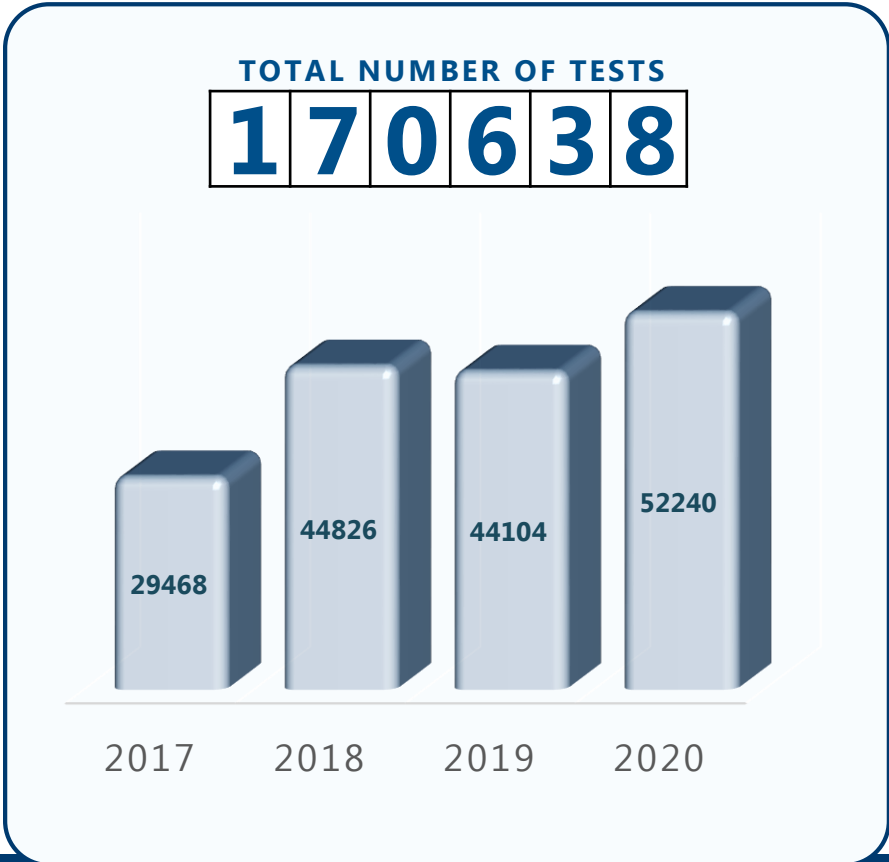

Zurich, April 2020

The Stickiness Testing Method for Contest Instruments is a method for the determination of the stickiness of cotton, based on the thermo-mechanical principle on an automatically prepared thin fibre web.

Recognition of a testing method or instrument means that according to the Committee the instrument manufacturer has provided sufficient information and results from instrument comparison of multiple testing units in order to assess whether the instrument can be usefully applied in textile mills or for research purposes.

APRIL 2020

- **ENHANCED VOLUME TEST**
- **IMPROVED CARDING EFFICIENCY**
- **DOUBLED MAX NUM. TEST PER DAY IN 4 YEARS**

- 5 cotton samples, A-E*
- Fully covered the detection range
- 6 tests/sample for 15 consecutive days (3 weeks)
- Alternating testing sequence (A₁, B₁, ..., D₆, E₆)
- Same operator
- Same instrument (CONTEST-S)
- Same laboratory (at manufacturer)

ANOVA (ANALYSIS OF VARIANCE) of daily mean values between the 3 weeks

COTTON	F-calculated	F(0.95;2;12)	EVALUATION
A	0.8510	3.8853	No significant difference between weeks
B	0.7953		No significant difference between weeks
C	2.7441		No significant difference between weeks
D	0.6699		No significant difference between weeks
E	0.2980		No significant difference between weeks

- 4 different laboratories: manufacturer + 3 customers
- 6 different Stickiness Testers involved
- 5 cotton, A-E*, (35 g per sample per lab)
- Delivered with random labels
- Fully covered the detection range
- **6 tests/sample**
- Alternating testing sequence (A₁, B₁, ..., D₆, E₆)
- Pre-conditioning of 48 h at least (ASTM D1776)
- Cleaning before starting the RT
- In one day by one operator

EXAMPLE

ANOVA (ANALYSIS OF VARIANCE) within/between instruments for each cotton

COTTON	F-calculated	F(0.95;5;30)	EVALUATION
A	? 5.8316		Significant difference between instruments

MECHANICAL DETECTOR

MINICARD

THERMODETECTOR

SCT

THERMODETECTOR

H2SD

"The tendency of cotton fibers to stick to textile working surfaces"

UNI EN 14278-1 (SCT)

UNI EN 14278-2 (H2SD)

UNI EN 14278-3 (CONTEST)

STICKINESS ROUND TRIAL FROM 2017-1 TO 2019-2

- 4 different methods (MINICARD, SCT, H2SD, CONTEST)
- About 23 instruments involved
- 26 homogenized samples by CIRAD
- 6 tests per cotton
- Recommended: alternating testing sequence
- Pre-conditioning 24-48 h in ASTM D1776 or ISO-139
- In one day and by one operator

(!) DIFFERENT UNITS

(!) NO DIRECT COMPARISON AVAILABLE

WITHIN METHOD

- Mean values for each RT cotton

BETWEEN METHOD

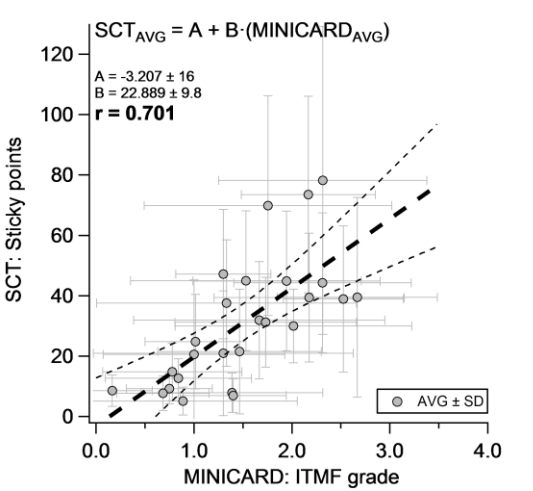

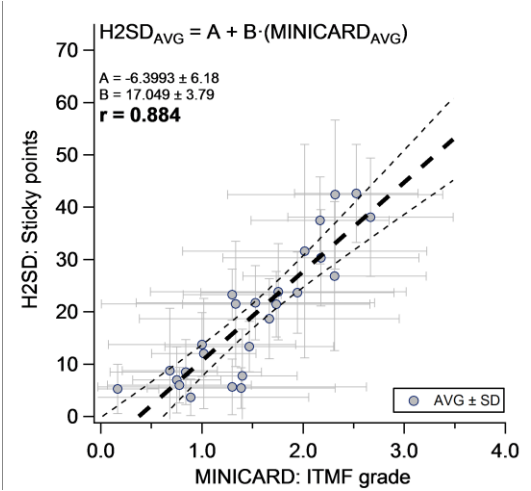

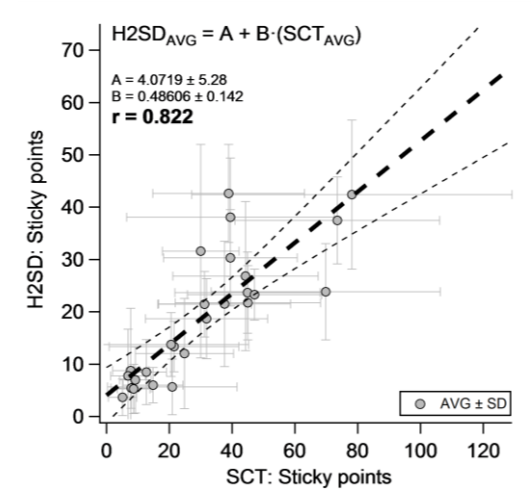

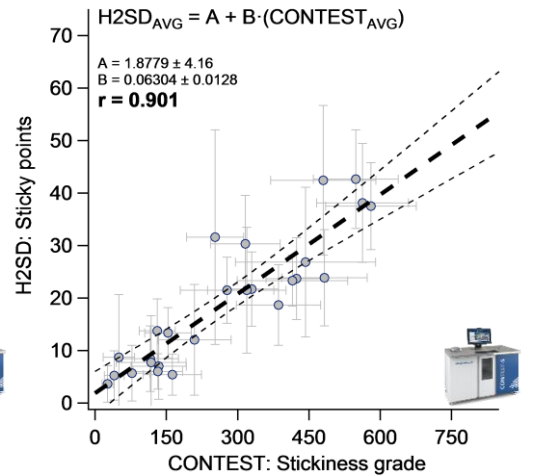

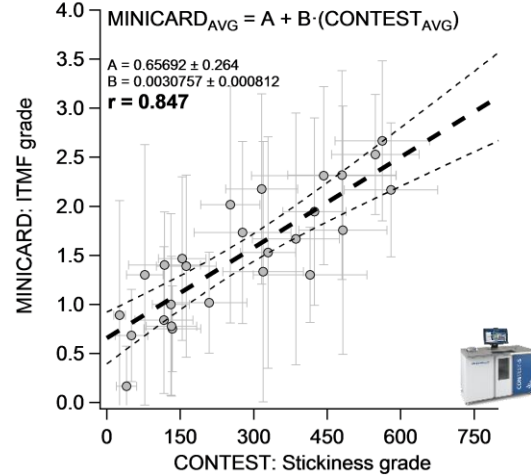

- Bravais-Pearson correlation r

r		x-axis			
		MINICARD	SCT	H2SD	CONTEST
y-axis	MINICARD	1	0.701	0.884	0.847
